ПРОГРАМА

F5 BIG-IP Administration Training

- Setting Up the BIG-IP System
- General Administration of the BIG-IP System
- Traffic Processing Algorithms
- Network Configuration
- Configuring and Managing a High Availability Deployment
- Using NATs and SNATs
- Configuring Multi-Tenancy
- Using Rolled Based Access Control
- Monitoring Application Health

F5 BIG-IP Local Traffic Manager (LTM) Configuration Training

- Reviewing BIG- IP System Configuration
- Load Balancing Principles with LTM
- LTM Configuration Objects
- Processing Traffic with Virtual Servers
- Monitoring Server and Application Health
- Load Balancing Methods
- Modifying Traffic Behavior with Persistence
- Processing Traffic with SNATs
- Modifying Traffic Behavior with Profiles
- Customizing Application Delivery with Local Traffic Policies
- Customizing Application Delivery with iRules
- Securing Application Delivery with LTM

F5 BIG-IP Troubleshooting Training

- Troubleshooting Methodology
- Troubleshooting – Bottom to Top
- Troubleshooting Tools
- Using System Logs
- Troubleshooting Lab Projects
- Working with F5 Support

Riverbed: From the first steps to the department of monitoring

- Building a complex monitoring system. Based on technologies: Portal, NetProfiler, FlowGateway, AppResponse11, NetIM, AppInternals, Aternity.
- The first step in monitoring. Basics of infrastructure monitoring: NetIM, Portal.
- Basics of Traffic Monitoring (NPM). Based on technologies: Portal, NetProfiler, FlowGateway, AppResponse11.

F5 BIG-IP ASM, AFM, APM: Deployment, management and setting security products

Configuration of BIG-IP Advanced Firewall Manager

- Installation and configuration of the BIG-IP AFM module
- Principles of AFM operation
- Operating modes of the firewall
- Screening rules, policies, address/port lists, rule and schedule lists
- Basic DoS protection
- IP reputation database, dynamic blocklists and allowlists, shun lists
- Reporting and Notifications

Configuration of BIG-IP Application Security Manager

- Basics and vulnerabilities of web applications
- Implementation of security policies
- Attack signatures
- Setting up a positive security policy
- Cookies and HTTP headers
- Templates for applications
- Vulnerability scanners
- User administration and roles, user session tracking
- Detection of anomalies
- Support for XML, AJAX, JSON and web services

Configuration of BIG-IP Access Policy Manager

- Traffic handling scripts and configuration dialogue boxes
- Access policies, access profiles, visual editor of access policies
- Organization of access to web services
- Single Sign-On mechanisms
- Organization of network access
- Layer 4 and Layer 7 ACLs
- Organization of access to programs
- Organization of access to remote desktop services
- Authentication and authorization of users
- Checking end devices

Cloudflare Training
